

ALEXANDER HALSEY

alex.halsey5@gmail.com +33 6 88 51 83 84 alexanderhalsey.github.io Toulouse, FR

PROFILE

6 years shipping production software end-to-end, no waiting to be told how. Hand me a vague spec and a deadline — you get back a deployed product and the reasoning behind every decision, with AI tooling wired into every step.

STACK

TypeScriptVue.jsReact

NestJSPostgreSQLRedis

DockerGCPClaude API

CypressJest

PRACTICES

REST APIs · Auth · CI/CD ·
Microservices · Design systems ·
E2E & unit testing · Observability ·
LLM integration

EDUCATION

RNCP 6 — Web & Mobile Dev
La Capsule, Marseille · 2022

BEng Civil Engineering
Heriot-Watt Univ., Edinburgh ·
2013–18

International Baccalaureate
Le Rosey, Switzerland · 2011–13

LANGUAGES

English — native
French — fluent
Spanish — fluent

EXPERIENCE

Job Tracker — AI-scored application pipeline MAY 2026 – NOW
Shipped solo · Next.js · React · Prisma · Zod · Vitest
Nobody asked for this — I needed it, so I shipped it: a daily pipeline that ingests a dozen job-board feeds, cleans and deduplicates them, then has an AI evaluator score every opening so the best roles surface themselves.

AI Development Toolkit 2026 – NOW
Built for my own leverage · Claude Code · Anthropic API
A personal toolkit that makes building software with AI tools faster and more consistent: the right context ready for each project, plus reusable workflows for planning and code review — now learning to run several agents in parallel.

Donation Management System NOV 2025 – MAR 2026
Self-initiated, pro bono · NestJS · Vue.js · PostgreSQL · Redis · Docker
A non-profit was drowning in manual admin. I rebuilt their donation platform end-to-end — donor records, tax receipts, and email campaigns now run themselves.

Habit Tracker — desktop app SEP – OCT 2025
Shipped solo · Tauri · Rust · React · SQLite
Wanted a habit tracker that talks to the system calendar — so I picked up Rust and Tauri and shipped one in under two months.

Software Developer — Careside JAN 2023 – JUN 2025
Paris · Digital-health platform in 130 French hospitals · acquired by La Poste

- Owned the shared component library behind every company app — one source of truth, zero duplicated frontend work.
- Shipped features end-to-end — database, API, interface — no handoffs, no waiting on perfect specs.
- Built CI/CD pipelines that turned releases from a manual chore into a non-event; added tests where breakage hurts users most.
- Reviewed the team's code and demoed shipped features company-wide — implementation and reasoning both.

Software Development Intern — Careside JUL – DEC 2022
Ramped from first ticket to shipping full-stack features fast enough to be hired onto the team six months in.
